Carbon-constrained portfolios and their annual emissions

Latest available year per system

Optimized additions | **Zonal direct CO_2**

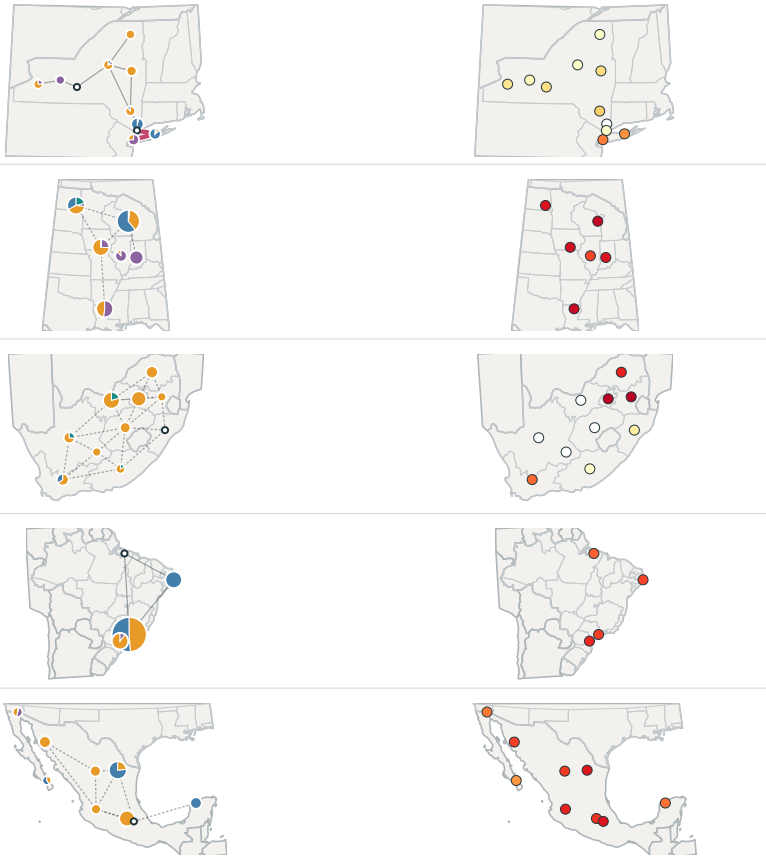

a NYISO 2035*
Annual cost US$ 8.44 bn
CO_2 3.55 Mt
Budget 3.55 Mt (100.0% used)
Research basis RGGI

b MISO 2035
Annual cost US$ 55.96 bn
CO_2 164.64 Mt
Budget 164.64 Mt (100.0% used)
Research basis MISO Future 2

c South Africa 2035
Annual cost US$ 14.37 bn
CO_2 142.00 Mt
Budget 142.00 Mt (100.0% used)
Research basis IRP 2025

d Brazil 2035*
Annual cost US$ 33.74 bn
CO_2 29.00 Mt
Budget 29.00 Mt (100.0% used)
Research basis PDE 2035 SIN

e Mexico 2030
Annual cost US$ 22.26 bn
CO_2 85.66 Mt
Budget 119.00 Mt (72.0% used)
Research basis PROSENER

* Four trajectories tied at the minimum recorded cost; Sol single-agent is shown.
Hollow emission points = zero; positive values below 0.01 use the lightest colour.

Model-zone locations and schematic links. Budgets apply to each whole system.
